## **B&W Energy Services and klean corp international Announce Strategic Alliance**

*Broader Service Offering Creates Advantages for Clients*

**HOUSTON, Texas**—June 20, 2017—B&W Energy Services and Klean Corp International (kci) have announced the formation of a strategic alliance between the two companies to provide an enhanced range of services to clients of both companies. By working together the clients of both companies will benefit through efficiently executed projects that result in significant bottom line savings.

Chemical cleaning utilizing kci's proprietary environmentally-friendly, ambient temperature chemistries and methods involves less equipment, and therefore presents significant savings in time and cost for projects where 'green' and safe chemical cleaning is desired. This brings a new competitive advantage for projects B&W mobilizes on across the globe.

“As B&W continues to be sought after for new construction projects world-wide, we found that environmentally friendly chemical cleaning was a gap for us, “ said Joel Babin, COO of B&W Energy Services. “By partnering with kci to source their chemical cleaning chemistries and processes, B&W can now offer comprehensive service options to our clients.”

For twenty years and with 80,000 cleaning projects under their belt, kci has been dedicated to providing quality cleaning services within its core principles and values described by its 'God, Family, Team & Me®' priority statement. The company's "disposal friendly" chemical cleaning chemistries and methods are a safe and efficient process to remove foulants from equipment internals without damage to the equipment, personnel or environment. Their formulas and application methodologies have economically cleaned equipment to a standard that cannot be met by the previous methods of large high pressure volumes of harsh, high temperature chemicals. The safe, green formulations are designed with total quality output as the primary consideration.

“Our team at kci takes pride in being centered on culture, integrity, service and quality, “ explained Robby Burdge, CEO of kci. “Our proprietary chemistries are of the highest quality because we develop and manufacture them in-house and ensure our cleaning services are executed effectively and efficiently.”

Additionally, kci’s method and chemistry do not need heat allowing them to be performed at ambient temperatures, are low-flow rather than high-pressure, and on-site disposal is typically acceptable. This means chemical cleaning that can be done in half the time, and half the cost.

The strategic alliance with B&W gives kci an industry leading partner to bid a comprehensive scope of work on projects it is involved in. As the leading provider of engineering, pre-commissioning and commissioning services worldwide, B&W looks forward to being able to offer a more sustainable and safe chemical cleaning process.

To learn more about the alliance between kci & B&W Energy Services, and the increased cost savings for chemical cleaning projects, please contact Shelby Pipken at 214-215-6258 or [info@bwenergyservices.com](mailto:info@bwenergyservices.com).
